

Google Authenticator

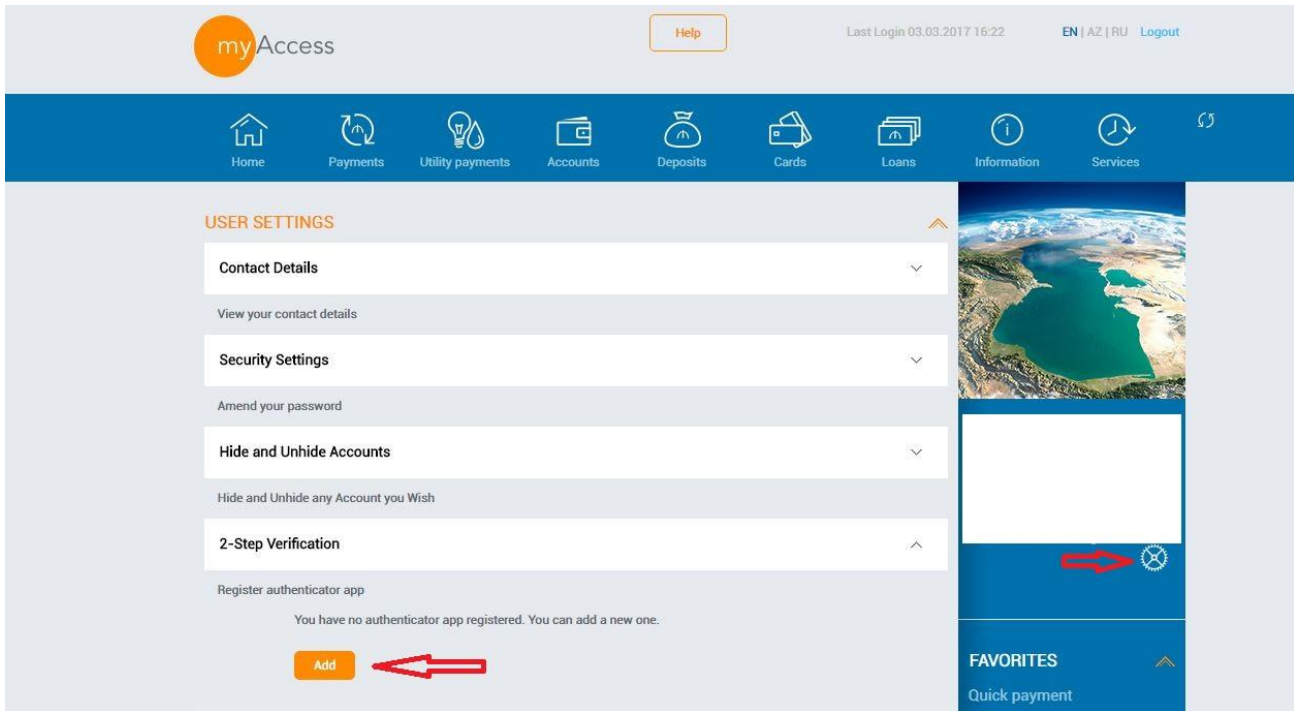

In order to connect and use Google Authenticator in myAccess system you need to do following steps. First of all, depending on operating system of mobile device search and install Google Authenticator in Google Play Market or AppStore:

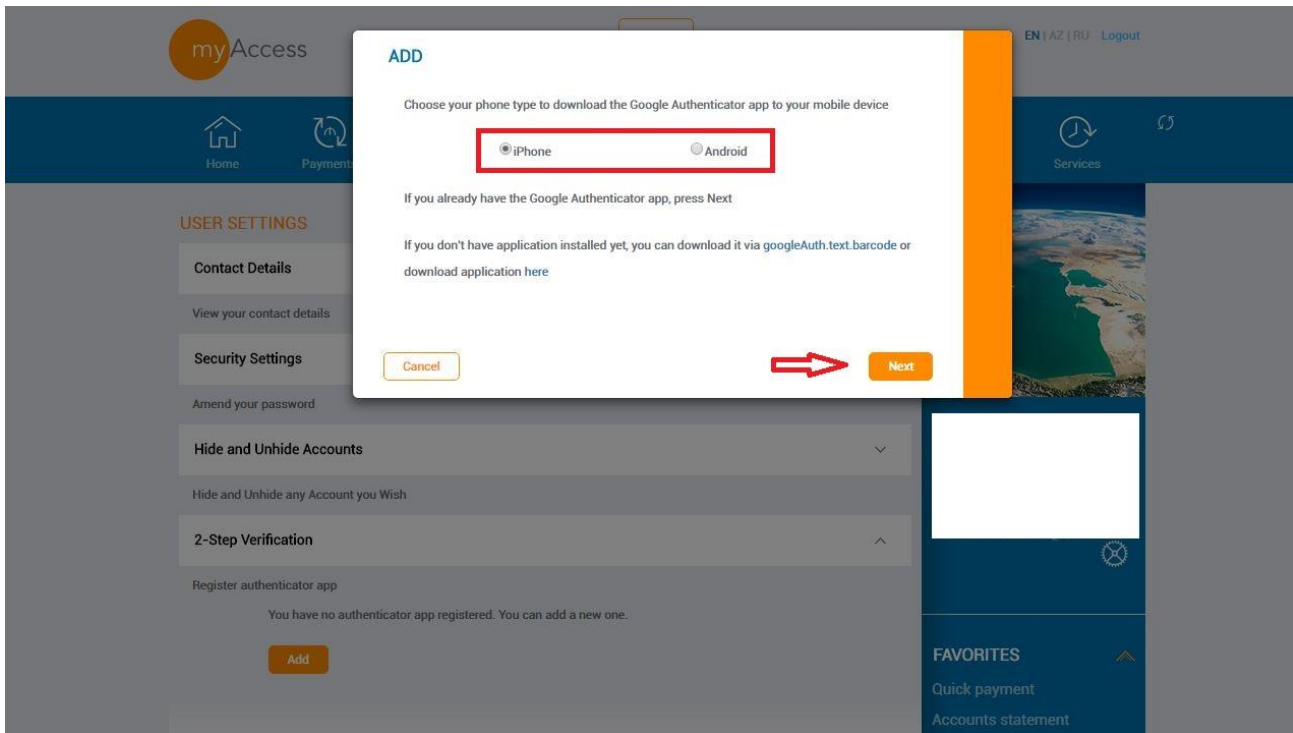

After you should log into myAccess system, go to Settings and choose 2-Step Verification

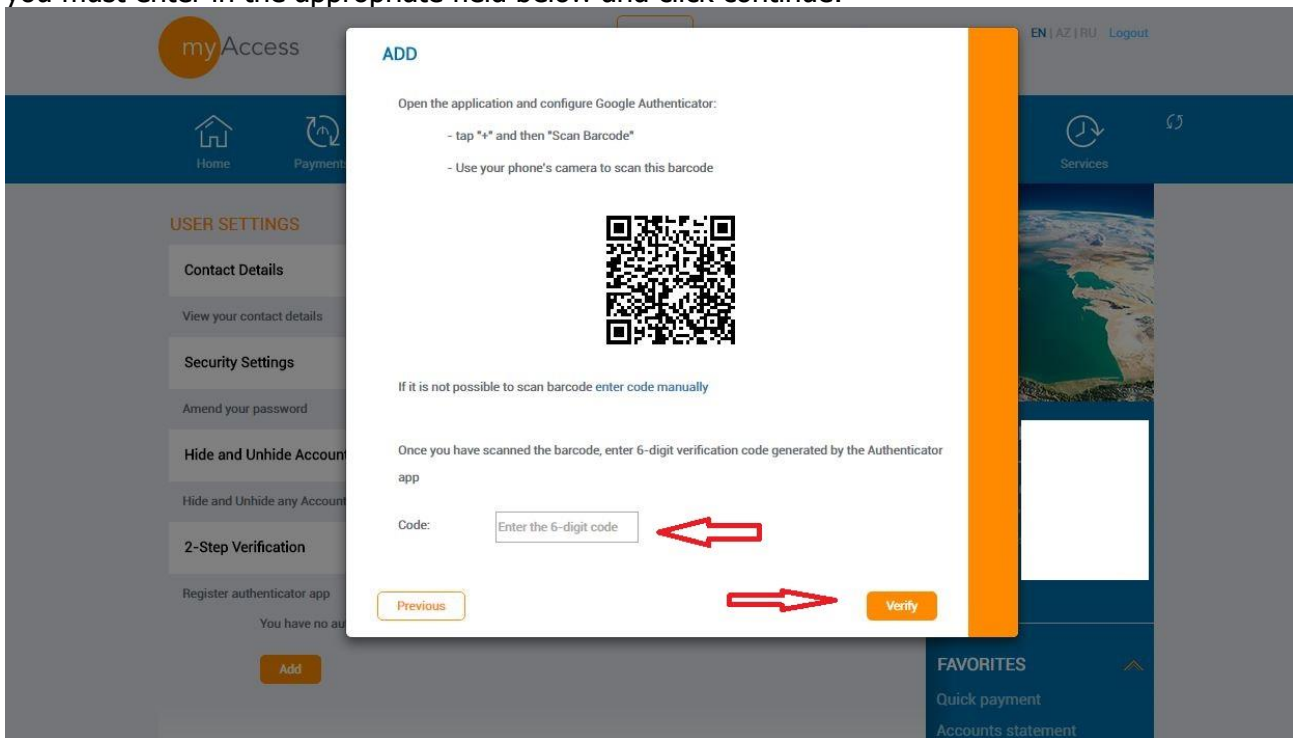

Choose "Add"

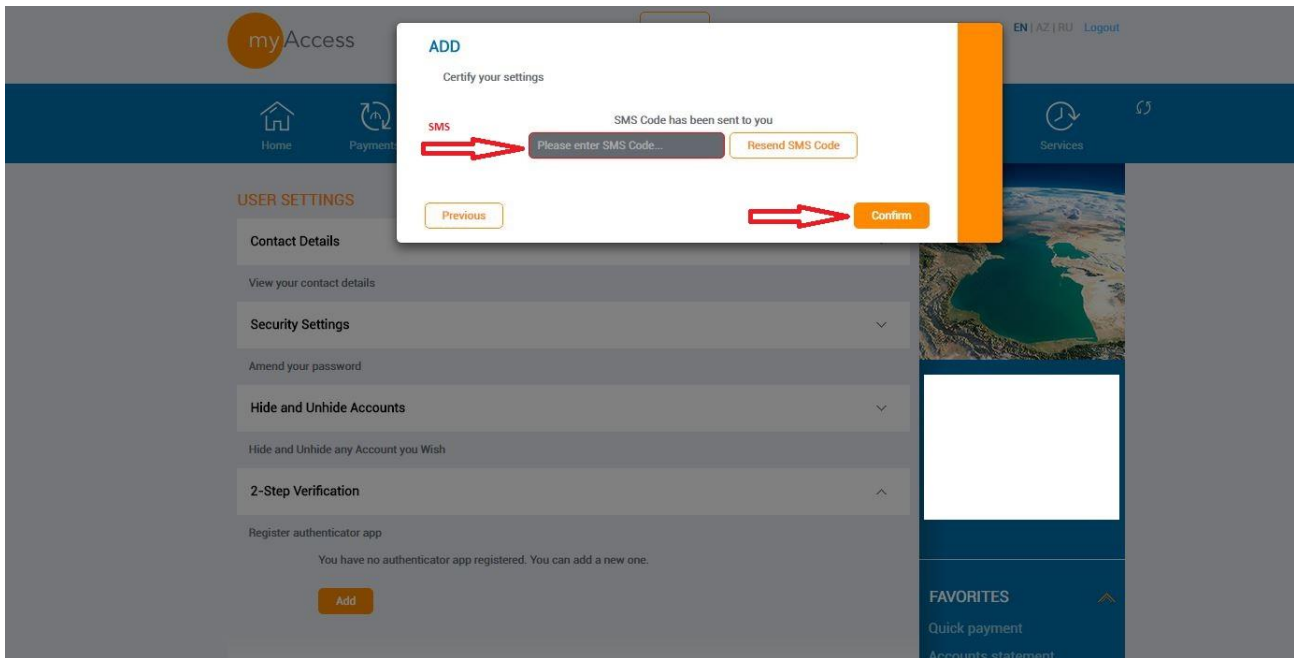

In a newly opened window, you need to specify to install the program to your Android or iPhone iOS device. Also on this page, there are links to find the applications in the AppStore or Google Market:

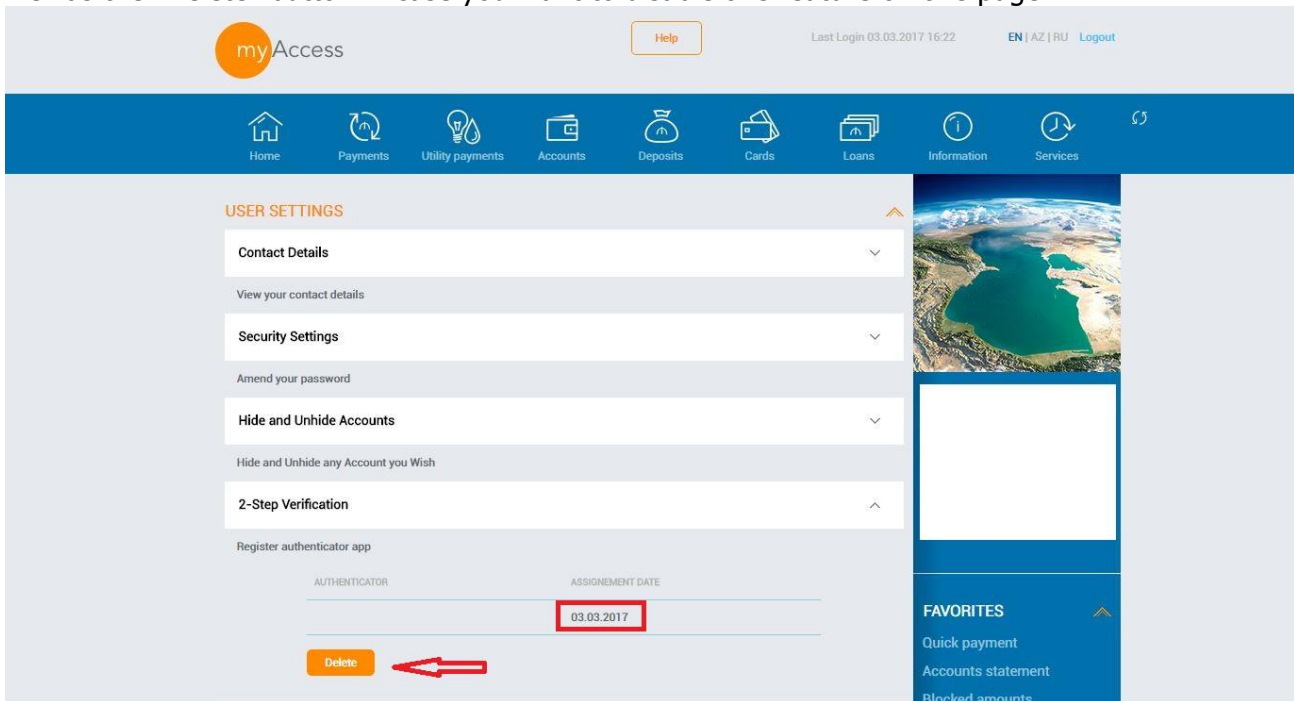

Then you need to run Google Authenticator application on your mobile device, press the + (or scan the barcode) button and scan the barcode you see on the computer screen. If barcode scanning is impossible for any reason then you may click on the "Manual entry". 6-digit code will be displayed on device's screen that you must enter in the appropriate field below and click continue:

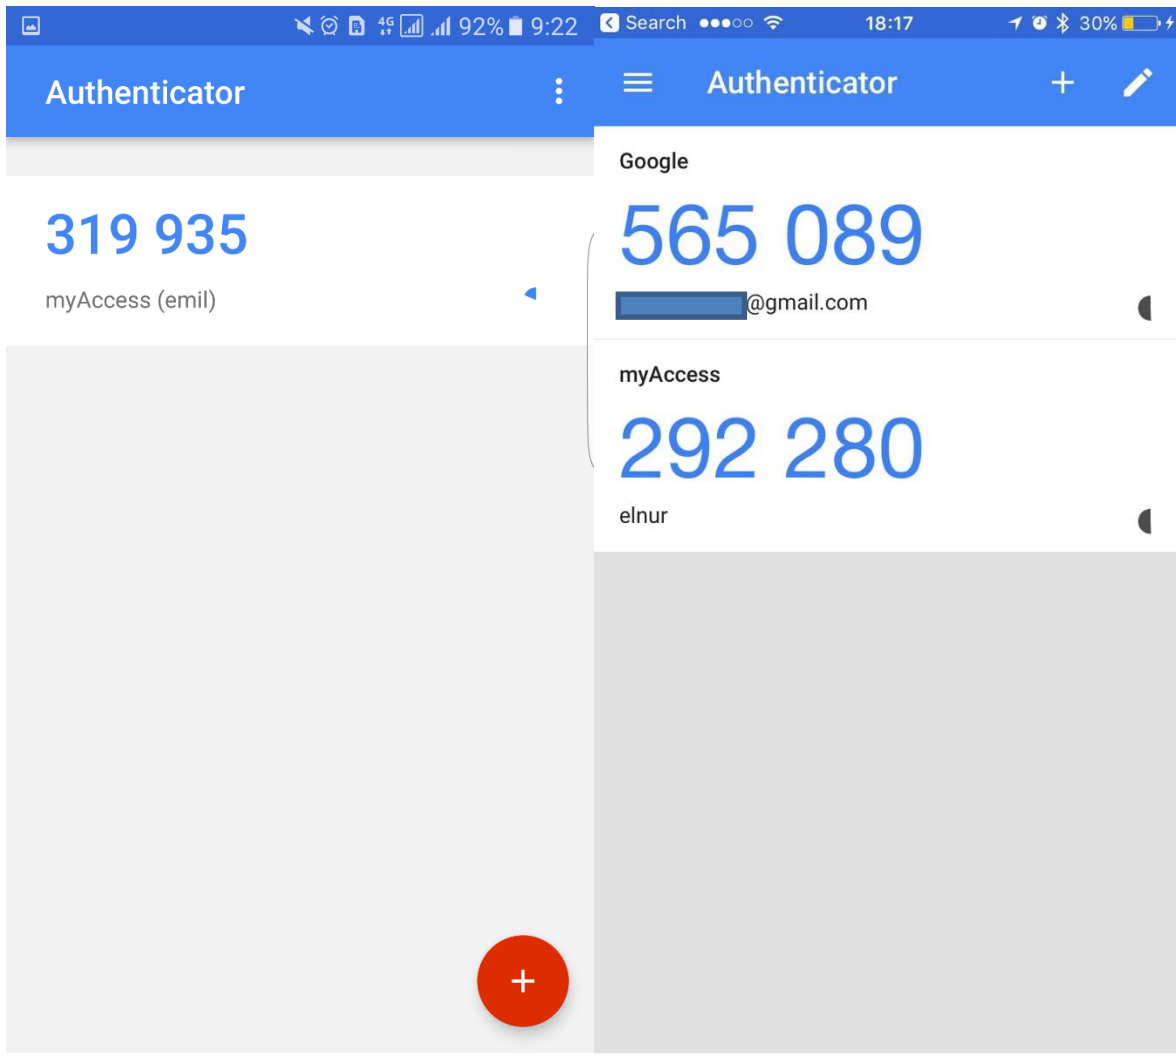

In a newly opened window, you may to confirm Google Authenticator method. Verification is performed via 4-digit SMS code as usual, as well as any other operations in the Internet banking

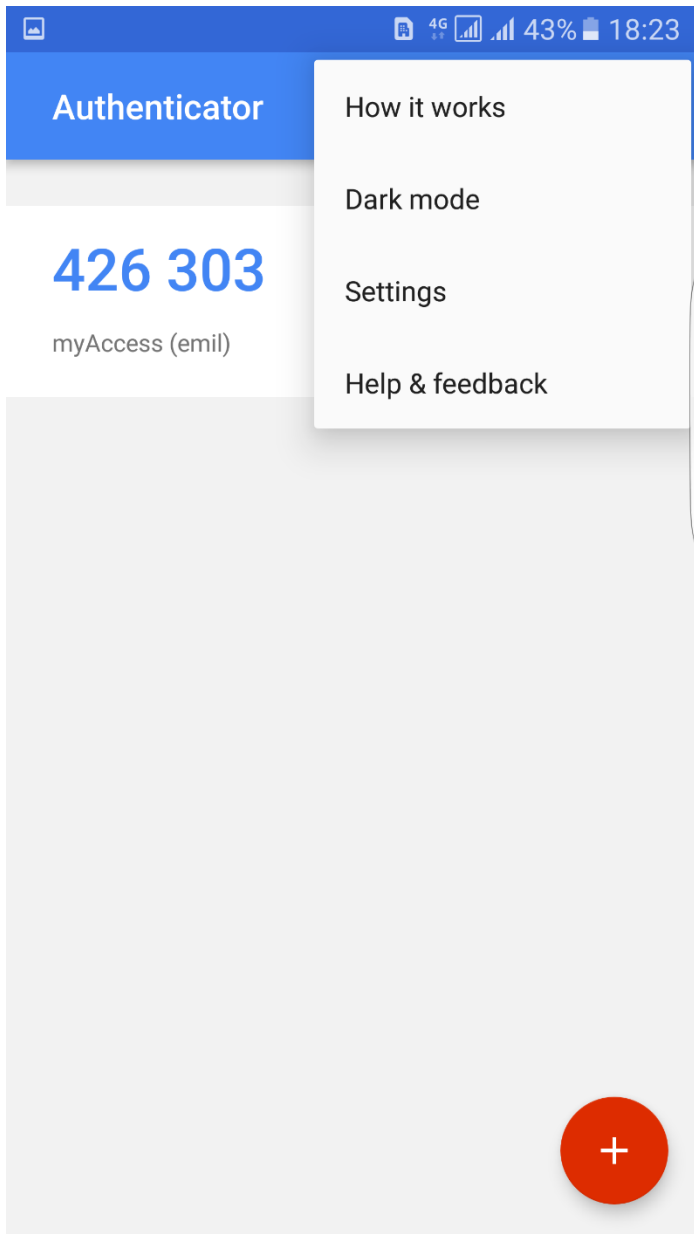

After activation is completed successfully, you will see the date when Google Authenticator was activated, as well as the "Delete" button in case you want to disable this feature on this page:

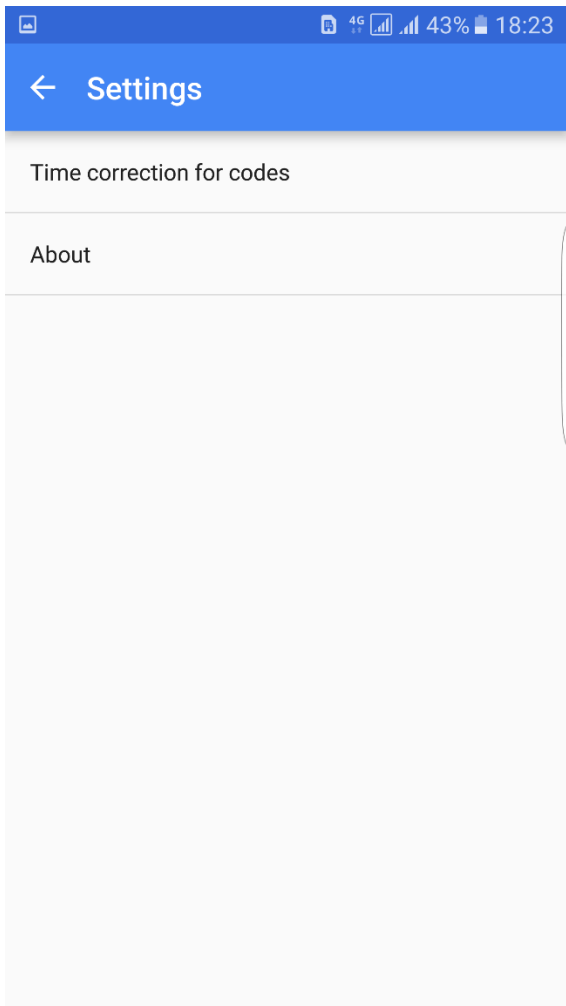

Here is how the code looks in Google Authenticator on your mobile device (For Android and iPhone iOS). myAccess system and your username are displayed respectively to the code

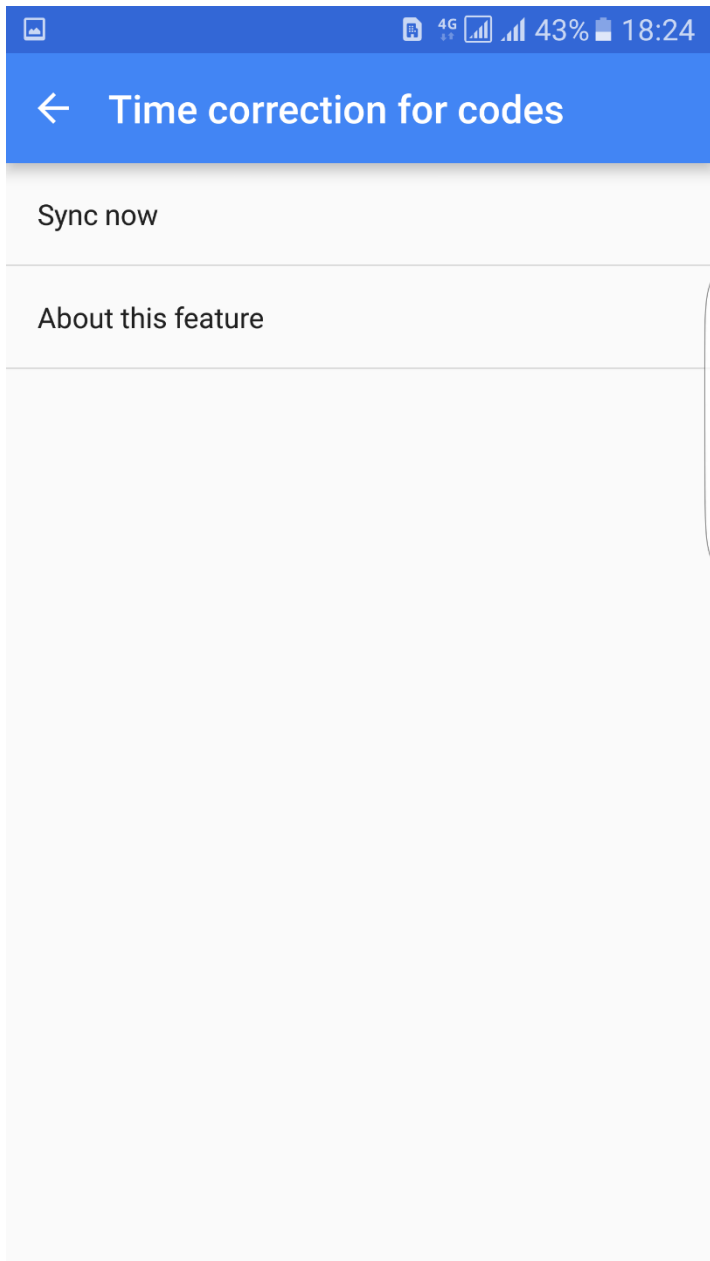

Each code is valid for 30 seconds and automatically changes, you should always use the code only you see on the screen. If you enter the code, but the system reports that it is wrong, then probably time settings is configured incorrectly on your mobile device. This can be easily solved by pressing to the Google Authenticator settings:

Select function "Time correction for codes":

And press "Sync now"

Synchronization takes a few seconds, then you can conveniently use the Google Authenticator for myAccess system. If after the synchronizing the problem still persists, then you need to set automatic timing on your phone settings.
